"Modes of expression and common structural features of the complete phenylalanine ammonia-lyase gene family in parsley.";

Proc. Natl. Acad. Sci. U.S.A. 92:5905-5909(1995).

-!- FUNCTION: Controls carbon flux to pigments essential for pollination or UV protection, to numerous pytoalexins synthesized by plants when challenged by pathogens, and to lignins.

-!- CATALYTIC ACTIVITY: Trans-cinnamate + NADPH + O(2) = 4-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro; IPRO01128; Cytochrome P450.                         plogy 202:586-605(1994).

FUNCTION: Essential for the initiation of viral DNA replications such as controlling it may contribute to other functions such as controlling switch to the late phase and leading to the inhibition of
            protein synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       503

Groelz D., Bachmann M.;

Submitted (OCT-1996) to the EMBL/GenBank/DDBJ databases.

1- FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor. Binds to the 3' termini of virtually all nascent
polymerase III transcripts. It is associated with precursor form
of RNA polymerase III transcripts including tRNA and 4.55, 55, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE FROM

                                                                                                                                                                                                                                                                                                                                                                                                                                                               DISEASE: Sera from patients with systemic often contain antibodies that react with t La protein as if this antigen was foreign.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.55, 55,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C-TERMINAL PART OF THE PROTEIN.

Biol. 231:196-204(1993).

FUNCTION: La protein plays a role in the transcription of polymerase III. It is most probably a transcription term factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

SUBCELLULAR LOCATION: Nuclear (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             erly D., Stutz

-!- FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor. Binds to the 3' termini of virtually all nascent
polymerase III transcripts. It is associated with precursor form
of RNA polymerase III transcripts including tRNA and 4.55, 55, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mámmalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                       Score
